

Milliken Infrastructure Solutions and WrapMaster Enter Strategic Alliance

Rigid coil system added to Milliken Infrastructure Solutions' Pipe Repair Offering

SPARTANBURG, SC (June 27, 2018) — Milliken Infrastructure Solutions, LLC (MIS) has announced a strategic alliance with WrapMaster in order to offer customers a broader set of composite repair solutions. WrapMaster, a Texas-based fiber reinforced polymer manufacturing company, specializes in rigid coil systems for the Oil & Gas industry.

“Our partnership with WrapMaster emphasizes our commitment to integrity and bringing best-in-class solutions to our customers,” said Jim Souza, Director of Technology at MIS. “Together, we now have the industry’s widest composite repair product offering, with the only rigid coil system to be third-party tested and approved up to 80 percent wall loss.”

The Pipe Wrap family of products, which include A+ Wrap™, Atlas™, FormaShield® and SplashGard™, combined with the capabilities of WrapMaster’s products, will offer a broader set of solutions to its customer base.

WrapMaster manufactures PermaWrap™ and WeldWrap™, the only composite pipeline repair sleeves designed to be detected by MFL “smart pig” tools. PermaWrap composite reinforcement sleeve is a patented, pre-manufactured rigid coil system available in widths up to 18 inches with “diamond grip” embossment technology. This technology provides a mechanical locking system that allows the individual layers of the wrap to nest within each other, minimizing the risk of telescoping and providing an overall easier installation process. PermaWrap no longer requires the composite to solely rely on the adhesive and risk disbondment, an unresolved issue among other rigid coil systems. WeldWrap is the only single unit rigid composite pipe repair system designed to reinforce defects in or near the girth weld, which can reduce repair time by nearly 60 percent and save on material costs.

“It makes sense to align with MIS and its similar values of superior customer service and continuous innovation,” said Glenn Davis, President and CEO of Wrapmaster. “Our constant dedication to provide a worldwide customer base with trusted products that last will continue with this partnership.”

WrapMaster has served the Oil & Gas industry for more than 20 years, attracting a worldwide customer base with innovative products at a reasonable price. To learn more, visit <http://wrapmasterinc.com/index.html>.

About Milliken Infrastructure Solutions

At Milliken Infrastructure, we are driven by our mission to DO GOOD within the civil/infrastructure markets and extend the useful life of existing assets. This is accomplished by providing superior engineering and field support and developing innovations that help owners to *STRENGTHEN*, *REPAIR*, *PROTECT* and *REHABILITATE* assets. We deliver a range of composite solutions to address issues across a variety of civil/infrastructure markets: from bridges and roadways, to buildings and structures, for oil and gas pipelines, and onto water, stormwater and sewer assets.

About WrapMaster

WrapMaster, Inc. is an FRP (fiber reinforced polymer) manufacturing company based in Longview, Texas. The company operates in a 10,000 sq. ft. facility equipped with “state-of-the-art” manufacturing equipment. WrapMaster manufactures PermaWrap and WeldWrap, the only composite pipeline repair sleeve designed to be detected by MFL "Smart Pig" tools. Both products are ISO TS-24817 / ASME PCC-2 / CSA / DOT Compliant.
